

- Quickly and securely provide positive ID
- Track activity of Documented Personnel
- Identify Visitors at your construction site
- Account for all personnel during an emergency
- Grant access only to authorized contractors and visitors

Know who is on your job site.

Mobile Identity and Tracking Solution

ConstructionSite — — — — Manager

ConstructionSite Manager is a powerful, efficient, mobile identity management tool that addresses your identification, tracking, and reporting needs. Comprised of both hardware and software, Construction-Gate ensures that those who access the job site have the authority to do so.

Identify

Provide secure photo IDs on-site for every employee and subcontractor to wear at all times. Easily capture data from a driver's license or state issued ID to speed up enrollment, plus attach I9 forms and other pertinent documents. Issued PVC card credential can contain barcode or any technology of your choice and can easily scan at each entrance/exit to track workers. By following the same enrollment process you can also identify and credential all visitors to the job site.

Track

Completely mobile, you can easily transport the solution from site to site and job to job to identify and track personnel as well as individual time spent on-site. Reporting is a snap. View and export accurate data that can be provided to accounting. Track assets such as tools, heavy machinery, etc. and assign a specific piece of equipment to a specific employee, easily identifying the responsible individual, if not returned.

Manage

ConstructionSite Manager allows you to manage personnel safety tests, contact information, skills and certifications so you always know what you have currently available or what is attainable. The optional web access gives you the ability to view and access information remotely, allowing you to keep an "eye" on what is taking place at your job site from a remote location such as corporate headquarters.
